

PRINCE GEORGE'S COUNTY

HISTORIC SITE SUMMARY SHEET

Survey #: P.G. #66-10

Building Date: 1896

Building Name: McDonnell House

Location: 7400 Dartmouth Avenue

Private/Residence/Occupied/Good/Inaccessible

Description

The McDonnell House is a large two and one-half story frame, gable roof dwelling with a wrap-around entry porch. It stands on a high brick foundation. It is located on a large tree-shaded corner lot in Old Town College Park. The three bay east (main) facade fronts on Dartmouth Avenue. The entry door, in the third bay, is surmounted by a rectangular transom. The door surround has a wide lintel with a raised crown molding. The 1/1 double-hung sash windows have a similar surround. The first story is sheltered by a hipped roof entrance porch which wraps around the south side of the building. The McDonnell House is basically rectangular in shape, with a projecting cross gable on the south and west sides. It is covered with narrow lapped horizontal wood siding milled in sets of two courses rather than only one. The boxed, crown molded cornice returns in the gable ends. All of the upper gables are covered with fishscale shingles and lighted by a centered window. The roof covering is slate.

Significance

The McDonnell House is significant for its simplified, late nineteenth century adaptation of the Queen Anne style. Built in 1896, it serves as a fine example of one of the early residences in College Park. The house is also significant for its association with its first and long-time resident, Dr. Henry B. McDonnell. McDonnell served as first Dean of the School of Chemistry, 1919-1921, of the University of Maryland. The McDonnell House was constructed in 1896 for the McDonnell family and Dr. McDonnell resided there until his death in 1958. The interior is essentially unaltered, retaining original plaster, light fixtures and moldings. The house retains the decorative surface materials of the Queen Anne style. The style is simplified however. The result is an imposing house in a more modern suburban style than the traditional Queen Anne. Simplification of late nineteenth century styles occurred as new suburban housing was constructed in the last decade of the nineteenth century and in the early decades of the twentieth century.

Acreage: 10,000 square feet

Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

The McDonnell House is a large two and one-half story frame, gable roof dwelling dating to 1896. It has a wrap-around entry porch and is set on a high brick foundation. It is located on a large tree-shaded corner lot in Old Town College Park.

The three bay east (main) facade fronts on Dartmouth Avenue. The entry door, in the third bay, is surmounted by a rectangular transom. The door surround has a wide lintel with a raised crown molding. The 1/1 double-hung sash windows have a similar surround. The first story is sheltered by a hipped roof entrance porch which wraps around the south side of the building. The porch has turned and chamfered posts. The brackets, which have been removed while the porch is being repaired, are simple curving arcs of wood. The porch rests on brick piers and is reached by a flight of five concrete stairs. The east facade is surmounted by a centered cross-gable covered with fishscale shingle. A rectangular 1/1 sash window with a crown-molded lintel is centered in the upper gable.

The McDonnell House is basically rectangular in shape, with a projecting cross gable on the south and west sides. It is covered with narrow lapped horizontal wood siding milled in sets of two courses rather than only one. The boxed, crown molded cornice returns in the gable ends. All of the upper gables are covered with fishscale shingles and lighted by a centered window. The roof covering is slate.

The south elevation is irregularly massed. The two bay main block is surmounted by a gable with a window centered at loft level. The entry porch shelters the first story, and stops upon intersecting a projecting gable roof bay at the center of the facade. This projecting two story bay is somewhat lower than the main block and has an oval window with a wide surround centered at loft level. The kitchen wing projects to the west (rear) of the dwelling and is two bays on the south side. In the ell formed by the kitchen wing and the projecting south bay is a one story, one bay infill which contains a small office. A brick chimney with a corbelled cap projects from the roof of the kitchen wing, above the office.

The two bay west (rear) gable end is narrower than the main block. A brick chimney rises from the gable ridge. A bulkhead cellar entrance is beneath the first bay. A rear entry to the kitchen is through a shed roof enclosed porch on the north side of the wing.

The three-bay north elevation is surmounted by a broad gable. The facade is irregularly fenestrated, with windows unevenly spaced. There is a rectangular window centered in the gable at loft level. The one-bay north elevation of the kitchen wing is inset from the north facade by approximately four feet. A large 2/2 sash window with louvered shutters is on the north wall of the enclosed shed roof rear porch.

The interior of the McDonnell House has an irregular plan. The north side stairhall is short and wide, forming a room rather than a hall. It is flanked to the left or south by a parlor. There is a second parlor and a dining room at the center of the house and a kitchen, pantry and small office at the back of the house.

The entry door has three horizontal lower panels and an upper large rectangular glazed pane. It is surmounted by a rectangular transom. The door is of dark varnished wood as are the doors and moldings throughout the house. The elaborately molded surround has an inner bead, a center ogee and an outer rectangular backband. The lintel has a wide plain frieze and a crown molded cornice.

The closed string stair rises along the north wall of the stairhall, turns 90° at a small square landing and rises along the west wall to the second story. The second run of the stair is enclosed. The balusters are turned with rectangular blocks at the upper and lower ends. The rectangular newel post has inset panels with bead molding. It is set on a high base, and there is a dentilled band beneath the flat, overhanging cap. The spandrel is paneled with narrow vertical board wainscot. The baseboard throughout the first story is approximately ten inches wide, with an elaborate cap having two half-round moldings.

The flooring throughout the interior is of narrow regular width boards. The plaster is original as are the light fixtures in the stairhall and the principal first floor rooms.

A large rectangular opening with pocket doors in the south wall of the stairhall leads to the front parlor. A door at the west end of the hall enters the dining room.

The dining room measures 17 x 17 feet as do the other two principal rooms on the first story. There is a built-in china closet in the west wall of the room, which double leaded glass doors. The closet has the same surround and lintel as doors throughout the house. Pocket doors in the south wall of the room lead to the southwest parlor. A mantel on the west wall of the parlor is the only hearth in the house. The original mantel has been replaced by a brick surround. In the west wall, south of the hearth is an entry to a small room, measuring approximately 6 x 8 feet, which served as an office for the first resident of the house, Professor Henry B. McDonnell. It is lighted by a small 1/1 sash window.

MARYLAND HISTORICAL TRUST
STATE HISTORIC SITES INVENTORY FORM

Survey No. HC:66-10

Description (continued)

Section 7 Page 3

In the southwest corner of the dining room is an entry to a back hallway, containing the door to the basement stair, an enclosed back stair to the second story and pantry shelving. Access to the kitchen is via this back hallway.

The second floor of the house has a central hall running east-west, with five bedrooms opening off of it. Wood moldings and doors are the same as those on the first story, except that the doors are surmounted by transoms. The doors have the original butt hinges with Victorian floral designs. At the west end of the hall is an entry to the enclosed rear stair and an adjoining entry to the attic stair. The door to the attic is narrow with a wooden handle, three lower wood panels and an upper glazed panel. An original bathroom is at the west end of the hall. It has vertical board wainscotting surmounted by a chair rail, a wooden floor, a bathtub with ball-and-claw feet and an original furnace vent with an iron grill.

A shed roof frame chicken coop that was converted to a small studio stands at the northwest corner of the lot. At the southwest corner of the lot is a two story frame gable roof stable covered with horizontal lapped wood siding. The windows are 2/2 sash. A one story lean-to covers the east gable end of this building. The south side has two large double doors of vertical boards.

There is a specimen shag bark hickory on the south lot line and a large English walnut at the center of the rear yard. A line of three cedar trees follows the west (rear) lot line.

Prepare both a summary paragraph of significance and a general statement of history and support.

The McDonnell House is significant for its simplified, late nineteenth century adaptation of the Queen Anne style. Built in 1896, it serves as a fine example of one of the early residences in College Park. The house is also significant for its association with its first and long-time resident, Dr. Henry B. McDonnell. McDonnell served as first Dean of the School of Chemistry, 1919-1921, of the University of Maryland.

Henry B. McDonnell graduated in 1886 from Pennsylvania State College with a degree in Chemistry and Physics. He received a medical degree from the College of Physicians and Surgeons in Baltimore in 1888.¹ He maintained a small medical practice sporadically over his career.² McDonnell was appointed Professor of Chemistry at the Maryland Agricultural College (University of Maryland) in 1891. He assumed charge of the Department of Chemistry in 1892.³ McDonnell stayed at the University throughout his career, retiring in 1938. He also served as the Maryland State Chemist. He was prominent in the local community, assisting in the founding of the College Park Fire Department in 1925 and serving as the Fire Chief from 1926 through 1933.⁴

The McDonnell House was constructed in 1896 for the McDonnell family and Dr. McDonnell resided there until his death in 1958. The interior is essentially unaltered, retaining original plaster, light fixtures and moldings. Heavy carved chestnut architraves frame the doors and windows, and the same wood was used for the main stairway. The house retains the steeply pitched irregular roof shape, large size, facade-wide porch wrapping around one side wall, and decorative surface materials of the Queen Anne style. The style is simplified however, with the house having a primarily rectangular shape and the variation of surface treatment limited to horizontal lapped wood siding with fishscale shingles in the upper gables; and a slated-covered roof. The broad porch had turned posts with very plain arched brackets. The result is an imposing house in a more modern suburban style than the traditional Queen Anne. Simplification of late nineteenth century styles occurred as new suburban housing was constructed in the last decade of the nineteenth century and in the early decades of the twentieth century.

The McDonnell house is a large two- and -one-half story frame house. The main (east) facade is three bays wide, with transomed entrance in the third bay; the central cross gable above has fish scale shingling. A one-story porch spans the east facade, then turns and shelters part of the south facade. There are lower cross gables at north and south; the boxed cornices are returned at the gable ends. Windows in the house are 1/1, and on the east facade have plain wooden lintels with fascia and crown molding.

The interior is essentially unaltered. Heavy carved chestnut architraves frame the doors and windows, and the same wood forms a handsome staircase.

Standing to the west on the oversized lot is a frame carriage house.

BUILDER/ARCHITECT

STATEMENT OF SIGNIFICANCE

This house was built in 1896 by Henry B. McDonnell, professor of chemistry at the University of Maryland, who became its first Dean of Arts and Sciences.¹ In building this house, McDonnell abandoned the varied decorative features of the Queen Anne Style and reverted to a simpler spacious farmhouse concept, while still employing some late Victorian elements (e. g., fish scale shingles). This house reportedly had the first plumbing in College Park. McDonnell lived in this house until his death in 1958. His house serves as a fine example of one of the early residences in College Park.
